Care

Eels are nocturnal, so they are most active at night. They need a tank that is at least 20 gallons in size, and it should have a secure lid to prevent them from escaping. The water should be between 72 and 78 degrees Fahrenheit, and it should have a pH of 7.0 to 8.0.

Eels are carnivores, and they will eat a variety of live foods, such as worms, insects, and small fish. You can also feed them frozen or freeze-dried foods.

Eels are solitary creatures, so they do not need to be kept with other fish. However, they can be kept with other eels of the same species.

Diet

Eels are carnivores, and they will eat a variety of live foods, such as worms, insects, and small fish. You can also feed them frozen or freeze-dried foods.

It is important to feed your eel a varied diet to ensure that they are getting all the nutrients they need. You should also feed them small meals several times a day, rather than one large meal.

Supplies

In addition to a tank, filter, and heater, you will also need the following supplies for your eel:

* A hiding place * Live plants * Substrate * Food * Water conditioner * Test kit

Aquarium

The ideal aquarium for an eel is at least 20 gallons in size, and it should have a secure lid to prevent them from escaping. The water should be between 72 and 78 degrees Fahrenheit, and it should have a pH of 7.0 to 8.0.

You should also provide your eel with a hiding place, such as a cave or a piece of PVC pipe. Live plants can also help to create a more natural environment for your eel.

Diseases

Eels are susceptible to a variety of diseases, including:

* Ich * Fin rot * Swim bladder disease * Tuberculosis

It is important to quarantine new eels before adding them to your tank, and you should regularly monitor your eels for signs of disease. If you think your eel is sick, you should contact a veterinarian immediately.

Eels can make great pets for experienced aquarists. They are relatively easy to care for, but there are a few things you need to know to keep them healthy and happy. By following the tips in this guide, you can provide your eel with a long and healthy life.
